SUMMARY

Senior Salesforce Application Engineer with 7+ years of experience leading end-to-end architecture, development, and delivery of enterprise CRM platforms. Deep expertise in Apex, Lightning Web Components (LWC), Agentforce, and Salesforce API development across sales, supply chain, finance, and nonprofit domains.

TECHNICAL SKILLS

Languages & Web: Apex, JavaScript (ES6+), SOQL/SOSL, HTML5, CSS, XML, JSON, AJAX

Salesforce Platform: LWC, Aura, Visualforce, Agentforce (Atlas Reasoning Engine), Einstein Trust Layer, Platform Events, CDC, Pub/Sub API, Salesforce Shield, Sales Cloud, Service Cloud, Experience Cloud, Nonprofit Cloud, Custom Metadata, Async Apex (Batch, Queueable, Future, Scheduled)

Architecture & Design: Trigger Frameworks, Factory/Strategy Patterns, LDV Optimisation, Event-Driven Architecture, Governor Limits Engineering, Integrated CRM Platform Design, Multi-Org Design, Domain-Driven Design, Scalable Data Modelling

DevOps & Tooling: SFDX / Salesforce CLI, Copado, Gearset, CI/CD (GitHub Actions), Git, GitHub, Bitbucket, Postman, Workbench, Data Loader, Informatica IICS, PMD Static Analysis, Checkmarx

Integrations: REST/SOAP APIs, OAuth 2.0, SSO, Named Credentials, iPaaS Middleware, ETL Pipelines, MuleSoft (conceptual)

SDLC & Practices: Requirements Gathering, Technical Design, Test Automation, Agile, Scrum, Kanban, DevSecOps

EXPERIENCE

Salesforce

Hyderabad, India

Senior Technical Consultant

Aug 2025 – Present

- Owned end-to-end technical architecture of internal business applications serving 3 enterprise accounts (500K+ records each); defined platform standards and wrote clean, modular Apex code that reduced unplanned refactors by **40%** and became the org-wide engineering baseline adopted by 2 additional delivery pods.
- Architected and delivered scalable Go-To-Market (GTM) web applications via Apex and LWC, integrating Salesforce with enterprise ERP and Marketing Automation systems through iPaaS middleware, achieving unified data flow at **1M+ daily transactions** with **sub-200ms p99 latency**.
- Pioneered production deployment of Agentforce service agents leveraging the Atlas Reasoning Engine and custom Apex Actions – grounded via the Einstein Trust Layer – autonomously resolving complex customer interactions and cutting manual case handling by **35%** while maintaining compliance with privacy and legal requirements.
- Instituted a CI/CD quality gate framework via SFDX and GitHub Actions, enforcing **85%+ Apex code coverage** and PMD linting; reduced deployment errors by **40%** and compressed release cycles from **14 days to 3 days**.
- Led a cross-functional pod of **8+ engineers** across engineering, security, and business teams; drove team velocity **25%** higher via structured code reviews and ADRs; served as primary technical voice in C-suite sessions influencing **\$2M+** in platform investment decisions.

ABSYZ Inc.

Hyderabad, India

Senior Consultant – Salesforce Engineering

Sep 2023 – Aug 2025

- Authored and evangelised an org-wide Trigger Framework standard (Handler-Dispatcher pattern) across **15+ sObjects**, producing full technical documentation and runbooks; eliminated recursive-trigger incidents entirely and cut average bug-triage time by **45%** across a team of 12 developers.
- Engineered a shared library of **12 reusable, slot-driven LWC components** with UI specs and functional prototypes, adopted by 3 independent product squads and reducing per-sprint front-end development effort by **40%**.
- Led requirements gathering, technical design reviews, and end-to-end POC delivery for **5+ pre-sales engagements** across sales and supply chain domains, accelerating solution adoption by **30%** and winning 2 net-new accounts by de-risking architectural uncertainty before contract signature.
- Hardened org security posture in partnership with security and privacy teams via a comprehensive permission model redesign (Profiles, Permission Sets, Sharing Rules, OAuth, SSO, Named Credentials), reducing access-related incidents by **15%**; lifted sprint velocity **15%** and achieved **95% on-time** project completion.

- Architected the data layer for a Nonprofit Cloud client managing **2M+ constituent records**, applying LDV patterns (indexed external IDs, skinny tables, Queueable chaining) and cutting nightly batch windows from **6 hours to 2.5 hours**.

Accenture

Hyderabad, India

Application Development Analyst – Salesforce Developer

Nov 2021 – Sep 2023

- Eliminated recurring governor-limit breaches across a **2M+ record** dataset by introducing a Platform Cache-backed memoisation layer in core Apex service classes, reducing average CPU consumption by **30%** and ending a class of production incidents that recurred across 6 consecutive releases.
- Built a real-time event mesh connecting Salesforce to **4 downstream microservices** via Platform Events and CDC, enabling sub-second order-status propagation for a government-sector supply chain client processing **80K+ daily events**.
- Spearheaded a unit and integration testing overhaul; instituted mock-based test patterns achieving **95%+ Apex code coverage** org-wide; delivered training to **10+ developers** on test automation best practices, enabling **zero regression escapes** over the final 4 sprints.
- Championed DevSecOps adoption in partnership with security, privacy, and legal teams by integrating PMD and Checkmarx into the Copado pipeline, driving critical scan violations from **200+ per release to fewer than 15** within two sprint cycles.
- Mentored **4 junior developers** through pair programming and weekly design critiques, reducing team defect rates by **45%** and accelerating ramp to independent feature ownership within one quarter.

MediaMint

Hyderabad, India

Associate II (Salesforce Developer)

Jun 2019 – Nov 2021

- Delivered full-stack web development across **5+ client engagements** using Apex, LWC, Aura, and Visualforce; led requirements gathering, implementation, and ongoing support for in-house and customer-facing web applications.
- Redesigned Lightning record-page architecture, Custom Objects, Validation Rules, and Record Types, lifting user productivity by **25%**; promoted to Associate II within 7 months based on delivery performance.
- Automated bulk data operations for sales and finance domain workflows using Batch Apex, SOQL query optimisation, and Data Loader orchestration, processing multi-million-row datasets within governor limits and reducing manual operations effort by **60%**.
- Modelled a least-privilege security architecture – Profiles, Permission Sets, APEX-enforced sharing – for a 300-user multi-role org, coordinating with legal and security stakeholders and reducing findings in the annual security review by **90%**.

multicol

CERTIFICATIONS

- **Salesforce Certified Agentforce Specialist** (*Dec 2025*)
- **Certified Administrator** (*Aug 2022*)
- **Platform Developer II** (*Feb 2025*)
- **Platform App Builder** (*Jan 2023*)
- **Platform Developer I** (*Oct 2022*)
- **Certified Associate** (*Sep 2023*)

EDUCATION

Siksha ‘O’ Anusandhan University

Odisha, India

Bachelor of Technology, Electrical & Electronics Engineering

Jul 2015 – Jun 2019
