

Aman Kumar Mishra

Senior Salesforce Engineer | Apex & LWC | Agentforce | Integration Architecture

Hyderabad, India | +91-9599721351 | work.amankmishra@gmail.com | linkedin.com/in/amankmishra6397

Summary

Senior Salesforce Engineer with 7+ years of software engineering experience building and architecting enterprise-scale Salesforce Platform and Force.com applications using Apex, LWC, JavaScript, Flow, Agentforce, and API-led integrations. Strong object-oriented programming foundation with hands-on experience in design patterns, trigger frameworks, governor-limit optimization, large data volume (LDV), asynchronous processing, SOQL optimization, event-driven architecture, and distributed system integrations. Experienced designing Salesforce security and data models using OWD, Role Hierarchies, Permission Sets, Sharing Rules, and user-based security models. Proven ability to lead technical design, influence engineering standards, mentor developers, and partner with business, engineering, and product stakeholders. Hands-on practitioner of AI-assisted software engineering using GitHub Copilot, Claude, ChatGPT, and Cursor for code generation, debugging, code review, refactoring, testing, documentation, and developer productivity, with emphasis on enterprise security, governance, and data privacy.

Technical Skills

- **Salesforce Development:** Apex, Force.com, Object-Oriented Programming (OOP), Apex Enterprise Patterns, Trigger Frameworks, Visualforce, Lightning Web Components (LWC), Aura Components, SOQL, SOSL, JavaScript ES6+, HTML5, CSS
- **Salesforce Platform Architecture:** Salesforce Platform Architecture, Enterprise Application Architecture, Governor Limits, Bulk-Safe Design, Large Data Volume (LDV), Asynchronous Apex, Batch Apex, Queueable Apex, Future Methods, Scheduled Apex, Platform Cache, SOQL Optimization, Performance Tuning, Scalable Data Modeling
- **Salesforce Security & Data Modeling:** Organization-Wide Defaults (OWD), Role Hierarchies, Permission Sets, Sharing Rules, User-Based Security Models, Object/Field-Level Security, Salesforce Data Modeling, Relational Data Modeling, Complex Object Relationships, Salesforce Shield
- **Lightning & User Experience:** Lightning Web Components, Reusable UI Components, Performant UI Patterns, Secure UI Development, Aura Components, Visualforce, JavaScript, HTML, CSS, Responsive User Experiences
- **Integration & Distributed Systems:** REST APIs, SOAP Web Services, OAuth 2.0, Named Credentials, Platform Events, Change Data Capture (CDC), Pub/Sub API, Event-Driven Architecture, API-Led Integration, iPaaS Middleware, ETL Pipelines, Distributed System Integration
- **Automation & Platform Services:** Salesforce Flow, Flow vs. Apex Decision-Making, Declarative Automation, Platform Events, Change Data Capture, Agentforce, Atlas Reasoning Engine, Einstein Trust Layer, Custom Apex Actions
- **AI-Assisted Software Engineering:** GitHub Copilot, Claude, ChatGPT, Cursor, Prompt Engineering, AI Code Generation, AI-Assisted Code Review, Automated Refactoring, Debugging, Test Generation, Documentation Generation, AI-Assisted Development Workflows, Responsible AI, Enterprise AI Security, Governance, Data Privacy
- **DevOps & Engineering Practices:** Salesforce CLI/SFDX, Git, GitHub Actions, Copado, Gearset, CI/CD, Automated Testing, Release Management, PMD, Checkmarx, Postman, Data Loader, Version Control, Architecture Decision Records (ADRs), Coding Standards
- **Salesforce Clouds:** Sales Cloud, Service Cloud, Experience Cloud, Nonprofit Cloud

Experience

Senior Technical Consultant
Salesforce

Aug 2025 – Present
Hyderabad, India

- Owned and influenced technical direction and architecture for enterprise Salesforce applications across 3 accounts with 500K+ records each, establishing Apex coding standards based on object-oriented programming and reusable design patterns that reduced unplanned refactoring by 40% and were adopted by 2 additional engineering pods.
- Architected enterprise-scale GTM applications using Apex, LWC, JavaScript, and Salesforce Platform capabilities, integrating Salesforce with ERP and marketing-automation systems through iPaaS middleware to support 1M+ daily transactions across distributed system interactions.
- Designed and deployed Agentforce service agents using the Atlas Reasoning Engine, custom Apex Actions, and grounded enterprise data through the Einstein Trust Layer, reducing manual case-handling effort by 35%.
- Designed Flow-based declarative automation and established Flow-vs-Apex decision criteria for business logic, improving maintainability, reducing technical debt, and ensuring appropriate use of declarative versus programmatic automation.
- Built and governed a CI/CD quality-gate framework using Salesforce CLI/SFDX and GitHub Actions, enforcing automated testing, 85%+ Apex coverage, PMD analysis, and release controls that reduced release cycles from 14 days to 3 days.
- Led and assisted a cross-functional engineering pod of 8 developers through technical design reviews, Architecture Decision Records (ADRs), coding standards, and AI-assisted development workflows using GitHub Copilot and Claude, improving engineering consistency and developer productivity.

Senior Consultant – Salesforce Engineering
ABSYZ Inc.

Sep 2023 – Aug 2025
Hyderabad, India

- Architected and implemented an enterprise Trigger Framework using a Handler-Dispatcher design pattern across 15+ Salesforce sObjects, establishing bulk-safe, reusable Apex architecture that eliminated recursive-trigger incidents and reduced average bug-triage time by 45% for a 12-developer engineering team.
- Built a reusable library of 12 performant, slot-driven Lightning Web Components with secure UI patterns, adopted by 3 product squads and reducing front-end development effort by 40% per sprint.
- Designed Salesforce security architecture using Organization-Wide Defaults, Role Hierarchies, Permission Sets, Sharing Rules, and user-based security models to support scalable and secure enterprise data access across multiple teams.
- Led requirements analysis, technical architecture, solution design, and proof-of-concept delivery for 5+ pre-sales engagements across sales and supply-chain domains, partnering with business stakeholders and contributing to 2 net-new account wins.
- Architected a Salesforce data model and LDV strategy for a Nonprofit Cloud implementation managing 2M+ constituent records using indexed external IDs, optimized SOQL, skinny tables, and Queueable processing, reducing nightly batch processing from 6 hours to 2.5 hours.
- Mentored Salesforce developers through Apex design reviews, pair programming, LWC development, governor-limit optimization, and object-oriented design practices while using GitHub Copilot and ChatGPT for code review, refactoring, debugging, and automated test generation.

Application Development Analyst – Salesforce Developer
Accenture

Nov 2021 – Sep 2023
Hyderabad, India

- Eliminated recurring governor-limit breaches on a 2M+ record dataset by introducing a Platform Cache memoisation layer in core Apex service classes, cutting average CPU consumption by 30%.
- Built a real-time event mesh connecting Salesforce to 4 downstream microservices via Platform Events and Change Data Capture (CDC), enabling sub-second order-status propagation for a government-sector client processing 80K+ daily events.
- Integrated PMD and Checkmarx into the Copado CI/CD pipeline with automated testing gates, driving critical scan violations from 200+ to under 15 per release within two sprint cycles.
- Tuned SOQL queries and asynchronous Apex jobs (Batch, Queueable) across high-volume services, keeping large-scale transactions within governor limits and improving overall processing efficiency.
- Mentored 4 junior developers through pair programming and design critiques on Apex and OOP best practices, reducing team defect rates by 45%.

Associate II (Salesforce Developer)
MediaMint

Jun 2019 – Nov 2021
Hyderabad, India

- Delivered full-stack development across 5+ client engagements using Apex, LWC, Aura, and Visualforce, owning requirements gathering through implementation and support; promoted to Associate II within 7 months.
- Redesigned Lightning record-page architecture, custom objects, and validation rules, lifting user productivity by 25%.
- Automated bulk data operations for sales and finance workflows using Batch Apex, SOQL optimisation, and Data Loader, processing multi-million-row datasets within governor limits and cutting manual effort by 60%.
- Collaborated with business analysts and QA teams to translate requirements into scalable Apex and LWC solutions, ensuring consistent, on-time delivery across sprint cycles.

Certifications

Salesforce Certified Agentforce Specialist (Dec 2025) • Salesforce Certified Platform Developer II (Feb 2025) • Salesforce Certified Associate (Sep 2023) • Salesforce Certified Platform App Builder (Jan 2023) • Salesforce Certified Platform Developer I (Oct 2022) • Salesforce Certified Administrator (Aug 2022)

Education

Bachelor of Technology, Electrical & Electronics Engineering
Siksha 'O' Anusandhan University, Odisha, India

Jul 2015 – Jun 2019
